AFTERHOURS

The market closes. We don't.

Whitepaper, version 1.0

September 2026

A meme coin on Robinhood Chain, paired with tokenized HOOD stock.

This document describes a speculative meme asset with no intrinsic value. It is not an offer of securities and not investment advice. Read Section 12 before doing anything else.

Contents

1. Abstract

AfterHours ($AFTERHOURS) is a meme coin deployed on Robinhood Chain and quoted against tokenized HOOD stock rather than ETH or a stablecoin. It exists to personify a single structural fact of the tokenized-equity market: Stock Tokens can only be minted or redeemed while the New York Stock Exchange is open, while on-chain meme markets never close. Every weekend, the stock side of our liquidity pool is frozen and the meme side is not. That gap is the character, the schedule, and the brand.

The token has no product roadmap, no utility claims and no expectation of profit. What it has instead is a fixed, verifiable set of rules: 100% of supply in the pool at launch, zero team allocation, locked liquidity, and 100% of creator fees routed to a single public development wallet whose income and spending are reported on-chain every month.

2. Background: the RWA meme meta

Robinhood Chain launched its mainnet on 1 July 2026 as an Ethereum-compatible Layer 2 built on Arbitrum Orbit technology. Its flagship asset class is Stock Tokens: on-chain representations of U.S. equities and ETFs, issued by a licensed entity, backed one-to-one by shares held in custody, and not offered to U.S. persons.

Within weeks of launch, meme coins became one of the most active categories on the network. Launchpads then introduced a feature allowing a new token's primary Uniswap v4 pool to be quoted in a Stock Token instead of ETH. Traders named this the "RWA meta": to buy the meme, you must first hold the stock. Early examples paired meme tokens with tokenized NVDA, MSTR, MSFT, HIMS and AMC. By early September, meme-to-stock pairs were reported to be generating more daily volume than direct Stock Token markets.

AfterHours is built for this environment, and it is honest about what that means: the meta is weeks old, highly reflexive, and could end as quickly as it started.

3. The gap

Three facts combine to create the mechanism AfterHours is named after.

3.1 Minting follows Wall Street hours

Only licensed authorized participants can mint or burn Stock Tokens, and they can do so only while the NYSE is open (9:30 to 16:00 New York time, Monday to Friday, excluding exchange holidays). Outside those hours, the total on-chain supply of any Stock Token is fixed.

3.2 Meme pools never close

A meme coin paired with a Stock Token trades continuously. Every purchase of the meme deposits the Stock Token into the pool; every sale withdraws it. Between Friday 16:00 and Monday 09:30, the pool keeps absorbing or releasing stock while no new stock can enter the system.

3.3 On-chain float is small

The on-chain supply of a Stock Token is typically a tiny fraction of the real share count. When a meaningful share of that float sits inside a single meme pool, the remaining free supply becomes thin, and weekend prices can move well away from Friday's close. Several tokenized-equity issuers and listed companies have publicly objected to this effect. AfterHours does not attempt to engineer or amplify it; it exists to make a meme of it.

4. The meme

4.1 Character

The Night Trader: sunglasses, loosened tie, three screens glowing, the exchange building dark behind a "CLOSED" sign. Trading at 3 AM because the bell means nothing to them. The character is original and owned by the project; it does not depict any real person, brand mascot or licensed property.

4.2 Positioning

- Wall Street has a schedule. We don't.
- We trade against HOOD, on Robinhood's own chain. The self-referential loop is deliberate.
- Every Friday closing bell is a community event, not a marketing calendar entry.

4.3 What we explicitly do not claim

- No product, application or utility now or later.
- No partnership, affiliation or endorsement from Robinhood, the NYSE, Uniswap, or any launchpad.
- No price target, no "floor", no buybacks, no burn schedule. The team earns creator fees and says so.

5. Token specification

Field	Value
Name	AfterHours
Ticker	AFTERHOURS
Network	Robinhood Chain (Arbitrum Orbit L2, settles on Ethereum)
Standard	ERC-20
Total supply	1,000,000,000 (fixed, no mint function after launch)
Decimals	18
Team allocation	0
Presale / private sale	None

Field	Value
Supply in liquidity at launch	100%
Primary pool	AFTERHOURS / HOOD, Uniswap v4
Liquidity	Locked; lock transaction hash published before launch announcement
Launch venue	long.xyz (alternate: Bankr)

The contract address is published once, in the pinned post on the official X account, alongside the liquidity-lock hash. Any address circulated elsewhere first should be treated as fraudulent.

6. Fee model

Launchpads on Robinhood Chain route a creator fee from every swap in the primary pool to a wallet designated by the token creator. AfterHours designates one address: the development wallet. There is no splitter, no second destination and no discretion in the routing.

Share	Destination	Purpose	Controls
100%	Development wallet	Team compensation, design, community moderation, listings, tooling, legal review, weekly production of the closing-bell event	Public, named address; income and spending summarised on-chain on the first of every month

The fee recipient is set on the launchpad at deployment. Changing it would be a public act visible on the explorer and would be announced in advance.

6.1 Why 100% to the team, in the open

A meme coin with zero team allocation still has costs. Most projects cover them with a hidden allocation, insider wallets or undisclosed paid promotion. AfterHours covers them with the creator fee, which is the only thing the team earns and which anyone can watch arrive in real time. Full disclosure of a simple model is more honest than a complicated model nobody can verify.

6.2 What the fee does not do

- It does not fund buybacks, burns or price support of any kind.
- It does not flow to any wallet other than the one published in the pinned post.
- It is not a promise of any level of income to the team; if volume stops, so does the fee.

7. Dev wallet policy

1. Address. One address, fixed at launch, published in the pinned post and on the website.
2. Reporting. On the first of every month the team posts fees received, an itemised spend summary (design, moderation, listings, legal, tooling) and the closing balance.
3. Verification. Every figure in the report corresponds to on-chain transactions from the same wallet. Anyone can reproduce it.
4. Missing report. If a monthly report does not appear, the community should treat it as a breach of this document.

The dev wallet is compensation, not a treasury with obligations to holders. Nothing in this section creates an expectation that fees will be returned to the market.

8. Launch mechanics

The launch is timed to the mechanism it celebrates.

Time (New York)	Time (UAE)	Action
Fri 15:00	Fri 23:00	Educational thread published on X. No token mentioned.
Fri 15:55	Fri 23:55	"Five minutes to the bell" post.
Fri 16:00	Sat 00:00	NYSE closes. "CLOSED" image posted.
Fri 16:05	Sat 00:05	Token deployed on long.xyz. Pinned post: contract address, lock hash, dev wallet address.
Fri 16:15	Sat 00:15	X Space opens: "Trading while Wall Street sleeps."
Sat–Sun	Sat–Sun	Weekend Supply Tracker posts every six hours.
Mon 09:30	Mon 17:30	"Wall Street woke up" recap.

Target launch date: Friday, 18 September 2026. The date is chosen because Robinhood's gas-fee subsidy for the network is scheduled to end on 29 September 2026, and the eleven-day countdown is part of the launch narrative rather than a risk to hide.

8.1 Anti-manipulation commitments

- No bundled buys, no insider wallets, no sniping by the team at launch. Verifiable from the first block.
- No paid promotion presented as organic. Any paid placement is disclosed as such.
- No engagement farming, no bot raids, no fake volume.
- A public holder dashboard: top 20 wallets, concentration percentage, and the dev wallet balance.

9. Roadmap

Phase	Window	What happens
0. Setup	15–17 Sep 2026	Brand assets, dev wallet publication, dry run on launchpad, website live.
1. First Night	Fri 18 Sep	Launch at the closing bell. Pinned proof post. First Space.
2. First Weekend	19–20 Sep	Supply tracker, meme contest funded from the dev wallet, Telegram opened once the first community forms.
3. Countdown	21–29 Sep	Daily countdown to the end of the gas subsidy. Second closing-bell Space on 25 Sep.
4. Survival	30 Sep onward	Post-subsidy status report. First monthly dev wallet report on 1 Oct. Listings on CoinGecko / CoinMarketCap. Evaluate a second pool (e.g. AFTERHOURS / TSLA) if the meta persists.
5. Weekend Float	Month 2+	Open-source dashboard showing, for every Stock Token, how much float is locked in meme pools. Useful to the whole meta, keeps AfterHours attached to it.

Phases 4 and 5 are conditional on the project still having an active community. We will say so plainly if it does not.

10. Transparency commitments

- Every claim about supply, liquidity and fees is accompanied by a transaction hash.
- Development wallet spending is summarised monthly in a post on X.
- The fee recipient set on the launchpad matches the published dev wallet, verifiable on the explorer.
- This whitepaper is versioned. Changes are listed at the end of the document and announced.

11. Governance and team

AfterHours has no token-based governance. The rules in this document are fixed at launch. The team is small and pseudonymous by default; the development wallet and its spending are public, which is the accountability mechanism. The closing-bell Space and weekend tracker are the team's recurring commitments; the monthly report is the accountability check.

12. Risk factors

Read this section as if it were the only one.

12.1 Total loss

AFTERHOURS has no intrinsic value, no cash flows and no assets. It can and may go to zero. Nothing in the fee model prevents this.

12.2 The meta may end

The stock-paired meme trend is weeks old. Robinhood's gas subsidy ends on 29 September 2026. Network activity, and the liquidity of HOOD on-chain, could fall sharply after that date.

12.3 Stock Token risk

Tokenized HOOD is issued by a third party under its own terms. It is not available to U.S. persons. The issuer can restrict, pause or delist Stock Tokens. If HOOD becomes untradeable on-chain, the AFTERHOURS pool becomes illiquid.

12.4 Regulatory risk

Listed companies and regulators have already objected publicly to weekend price distortions in tokenized equities. Rules governing Stock Tokens, meme pools, or fee routing may change without notice, and could make continued trading impossible.

12.5 Smart-contract risk

The token, the launchpad and the pool are all code. Any of them may contain bugs.

12.6 Liquidity and concentration risk

Thin liquidity means large holders can move the price dramatically. The public holder dashboard exists so this risk is visible, not so it is absent.

12.7 Key-person risk

A small team can stop working. If the monthly report or the Friday Space stops, the only remedy is reputational: the log will show the gap.

13. Legal notice

This whitepaper is for informational purposes only. It does not constitute an offer to sell, a solicitation of an offer to buy, or a recommendation of any token, security or financial instrument in any jurisdiction. AFTERHOURS is not a security, is not registered with any regulator, and is not marketed to U.S. persons or to residents of any jurisdiction where such marketing is restricted, including as applicable under the rules of the UAE Securities and Commodities Authority and the Dubai Virtual Assets Regulatory Authority.

AfterHours is not affiliated with, endorsed by, or in any way connected to Robinhood Markets, Inc., Robinhood Assets (Jersey) Limited, the New York Stock Exchange, Arbitrum, Uniswap, long.xyz or Bankr. "HOOD" refers to a third-party tokenized representation of a publicly traded security and is used descriptively.

Nothing here is financial, legal or tax advice. Consult your own advisers. Trade only what you can afford to lose entirely.
